

AFTER / SIX NYC

When the day ends, what culture
is actually reachable?

Meredith Cui · Networks expanded into a public cultural-
access tool

Near is not the same as accessible

The shortest cultural trip is a sequence of network decisions

Columbia to MoMA: 1 train; 0 transfers; 33 modelled minutes

EUCLIDEAN DISTANCE

measures separation

NETWORK JOURNEY

measures decisions

Experienced access also changes with

WHEN	Will it still be open?
COST	Can this visitor afford it?
MOBILITY	Is a step-free station nearby?
INTEREST	Is it worth the trip for me?

The Networks exercise became a public decision tool

Typical weekday model, not live MTA service

The interface lets each user change the question

01 ANY ORIGIN

Search an NYC address or choose a point.

02 OPEN AT ARRIVAL

Every destination gets its own arrival time.

03 PERSONAL PROFILE

Interests, budget, trip limit, and mobility.

04 ON NOW

Date-checked programs link to official pages.

Prototype profiles and saved places stay in the browser; no login is required.

Time and price change the evening choice set

Controlled analytical sample: 25 detailed admission profiles.

9
open + within \$15
Friday 6:30 PM

6
free at that moment

39 min
median modeled journey

The closest option can disappear because it closes, exceeds budget, or takes longer through the network.

Good cultural maps show their assumptions.

WORKING NOW

161 screened public places
Route and arrival for every place
106 weekly schedules
16 date-checked programs

CURRENT LIMITS

Static, not live, GTFS
No delay or elevator outage feed
No sellout or interior-access data
Cannot calculate whether a place feels welcoming

NEXT SEMESTER

Live transit and elevator feeds
Automated official event updates
Optional cross-device profiles
User testing + deeper equity analysis

Access is a relationship between a person, a place, a time, and a network.
